Manufacturing

The manufacturing sector is the largest employer among major economic activities in the Czech Republic. This sector provided 1.43 million jobs, or 28.6 per cent of total jobs in 2008 (see Figs. 1 & 3). The number of jobs in the sector increased by more than 151,000 between 2000 and 2008, and the sector grew at average annual rate of nearly 1.4 per cent. Manufacturing sector employment has been growing at nearly twice the annual rate of the economy as a whole. The total Czech economy added more than 270,000 jobs over this period, with manufacturing creating more than half of all new jobs in the economy. Manufacturing also contributes a significant portion of value added to the country's GDP, reaching more than 32 per cent of value added GDP in 2008 (see Fig. 2).

The largest manufacturing sectors in the Czech Republic in 2008, in terms of employment, are the fabricated metal products industry (179,500 jobs); the motor vehicles industry (151,300 jobs); the machinery and equipment manufacturing industry (149,500 jobs) and the food products and beverages processing industry (112,500 jobs). Employment levels in all subsectors, except food and beverage manufacturing, have increased between 2000 and 2008. Growth in motor vehicles manufacturing was particularly rapid, averaging 8.9 per cent annually. Employment levels in this subsector more than doubled over the same period.

The manufacturing industry in the Czech Republic is anchored by small and medium sized enterprises, which represent the largest number of enterprises operating within the industry. In 2006, more than 140,000 manufacturing enterprises with less than 20 employees were in operation. Flows of foreign direct investment in manufacturing have increased in the Czech Republic over the last several years, reaching a peak of more than 813 million USD in 2008. FDI flows in manufacturing during that year were concentrated in the food products industry, the mechanical products industry, and the radio, television and communications industry. The motor vehicle and metal products industries have also been strong recipients of FDI flows in recent years. Major flows of FDI have come primarily from other European Union countries including Austria, Germany and Switzerland, but also from the Russian Federation, the Republic of Korea and the United States.

Average working time in manufacturing remained fairly constant between 2000 and 2008, averaging between 40.7 and 40.4 hours per week over this period. Workers in the paper and paper products industry and the food products and beverage industry experienced slightly longer average work weeks, with 41.4 and 41.8 hours per week, respectively. Workers in the clothing and chemicals and chemical products industries on average worked less than other manufacturing sector employees, with working hours averaging less than 39 hours per week over the same period.

Average earnings by workers in the manufacturing industry were slightly below the 2007 average for workers in all major economic activities taken as a whole. Manufacturing workers earned an average of 19,761 koruna per month, compared to 20,333 koruna per month for all workers. Average earnings in manufacturing increased at an average annual rate of 6.2 per cent between 2000 and 2007, slightly less than the 6.5 per cent growth in earnings for all workers over the same period.

Source: ILO Laborsta; Persons aged 15 years and over.

Wholesale & Retail Trade

Fig. 4: Employment in Wholesale & Retail Trade ('000s), 2000-2008

Commerce (also referred to as wholesale and retail trade) is the Czech Republic's second largest employer, after the manufacturing sector. In 2008, wholesale and retail trade provided 633,000 jobs; representing 12.7 per cent of total employment (see Figs. 1 & 4). Between 2000 and 2008, the sector contributed 7.6 per cent of the 270,000 net jobs generated throughout the economy.

The sector also contributed about 18 per cent of the 2008 GDP (see Fig. 2), up from its contribution of just 13.8 per cent in 2000.

The country's 2008 merchandise exports were approximately USD 146.8 billion, with imports at more than USD 142 billion. Manufactured goods, principally passenger cars, motor vehicle parts, computer equipment and basic metal products, represented nearly 90 per cent of those exports. The Czech Republic's main trading partners in 2008 included other European Union countries, the Russian Federation and the United States.

Investment growth in retail was mainly driven by companies headquartered in older European Union member states, such as Germany's Metro, Tesco from the UK, and Austria's Billa. The growing influence of such global retailers can be seen in the growing market share of larger department stores and hypermarkets though the role of small, independent retailers and grocery stores remains important, particularly in the more rural areas. Discount shops are also thriving.

Average monthly earnings in wholesale and retail trade, at Koruna 19,365, are lower than the all-industry monthly average of Koruna 20,333; the sector's average annual wage gains, at 6.3 per cent are also lower than the 6.5 per cent for the economy as a whole.

Key Labour Market Indicators (2009)

Economically Active Population:

Total: 5,286,450
Men: 2,999,100
Women: 2,287,350

Labour Force Participation Rate:

Total: 58.7%
Men: 68.3%
Women: 49.5%

Unemployment Rate:

Total: 6.7%
Men: 5.8%
Women: 7.7%

Construction

The construction industry provided 461,900 jobs in 2008, making it the third largest employment sector in the Czech Republic (see Figs. 1 & 5). The construction sector has added nearly 23,000 jobs since 2000 and has consistently contributed around 9 per cent of jobs in the total economy since 2000. In terms of value added to GDP, the sector contributed 5.1 per cent of value added in 2008. This represents a decline however, from the sector's 6.5 per cent share in 2000 (see Fig. 2).

Workers in the construction sector in the Czech Republic are engaged in a variety of different project types including both the development of private residential and non-residential buildings, civil engineering projects and other public works, as well as the renovation, maintenance and upgrading of existing infrastructure in the country. Public bodies were the leading domestic investors in construction contracts, particularly for civil engineering and water works programs. Projects in the construction sector have also included large transport infrastructure initiatives throughout the country, particularly the construction of motorways and the completion of an additional terminal at Prague's international airport. Small and medium-sized construction companies in particular have benefited from an increased number of private sector renovation and modernization projects, as well as from an increased number of new construction starts for individual housing units.

In terms of working conditions in the industry in the Czech Republic, workers in construction earned less than the average worker in 2007, with salaries averaging 18,781.0 koruna per month in construction compared to the national average of 20,333 koruna per month. This represents a strong increase over wage levels in the industry in 2000, when average monthly wages were just 12,509.0 koruna. Average earnings in the construction sector increased at an average annual rate of 7.2 per cent between 2000 and 2007, slightly faster than the overall average annual increase of 6.5 per cent over the same period.

Note: Persons 15 years and older. Sectors are classified according to ISIC Rev.3, as reported in ILO Laborsta. Sum of individual sectors may not equal total due to rounding. Total employment is comprised of all persons above a specific age who during a specified brief period were either in paid employment at work, with a job but not at work, or self-employed. This category covers not only employees (wage earners and salaried employees), but also employers, own-account workers, members of producers' cooperatives, contributing family workers and workers not classifiable by status. Data are non-seasonally adjusted.

Note: Persons aged 15 years and over. Excl. armed forces. Sectors are classified according to ISIC Rev.3, as reported in ILO Laborsta. Sum of individual sectors may not equal total due to rounding. Paid employment refers to workers in jobs where the incumbents hold explicit (written or oral) or implicit employment contracts which give them a basic remuneration which is not directly dependent upon the revenue of the unit for which they work, typically wages and salaries. Data are non-seasonally adjusted.
